RESEARCH FUNDING

Current Funding

Grant #: 75F40123F19010 (PI: Dublin) 12/31/2014–1/31/2023

US Food and Drug Administration Sentinel Innovation Center

Use Case Package 1 (UC1): Empirical Application of the Sentinel EHR and Claims Data Partner Network to Address ARIA Insufficient Inferential Requests

Role: Collaborative Scientist

Major Goals: For a selection of health outcomes of interest for which typical ARIA analyses were previously determined to be insufficient due to incomplete outcome identification, fitness-for-purpose (FFP) analyses will be conducted to produce recommendations regarding the likelihood of successful development of computable phenotype algorithms by incorporating rich EHR data and data-driven modeling methods.

Grant #: 2UG1 DA04031406 (PI: Bradley) 6/1/2017–2/28/2023

National Institute on Drug Abuse

PRimary Care Opioid Use Disorders treatment (PROUD) study.

Direct Costs: \$8,601,335.

Role: Co-Lead of Data & Analytics Team.

Major goals: To evaluate whether implementation of a model of opioid use disorder treatment in primary care in which a nurse care manager is added into the clinic increases access to opioid use disorder treatment (primary aim) and decreases acute care utilization among people with opioid use disorder (secondary aim), when compared with usual primary care.

Grant #: R01HD107083 (PI: Butler) 8/1/2022–4/30/2027

National Institute of Child Health and Human Development

Identifying Optimal Antibiotic Regimens to Treat Urinary Tract Infections During Pregnancy.

Role: Co-Investigator.

Major goals: 1) Characterize real-world prescribing patterns, guideline concordance, and antimicrobial susceptibility patterns related to outpatient treatment of UTI during pregnancy; 2) compare the risk of treatment failure with commonly-used antibiotic regimens in this setting; and 3) evaluate the comparative safety of commonly-used antibiotic regimens during pregnancy with respect to birth defects and perinatal complications.

Grant #: LTD10120 (PI: Yarborough) 12/31/2014–1/31/2023

Syneos Health

Protocol for ER/LA Opioid Post-Marketing Requirement Studies: Observational Study #2065-1A.

Role: Site Principal Investigator

Major Goals: To quantify the serious risks of misuse, abuse, and addiction associated with long-term use of opioid analgesics for management of chronic pain among patients prescribed extended release/long acting opioid products. In addition, we will estimate how the risk of these outcomes varies by the presence of risk factors such as other substance use and psychiatric disorders among patients treated with opioids long-term.

Completed Funding

Grant #: 1R21AG069111-01 (PI: Miller) 9/30/2020–6/30/2023

Pregnancy complications and the development of Alzheimer's disease and related dementias in women in the Adult Changes in Thought study

Direct costs: \$200,430

Role: Collaborative Scientist

Major goals: The major goals of this study are to augment existing reproductive phenotypic data in the Adult Changes in Thought study with detailed obstetric phenotyping and to evaluate the association between preeclampsia and other pregnancy complications and cognition and cognitive decline later in life.

Grant #: Ro1 DA044970 (PI: Sullivan)

3/15/2018–12/31/2022

National Institute on Drug Abuse

STRategies to Improve Pain and Enjoy life (STRIPE) trial.

Direct Costs: \$1,169,474.

Role: Collaborative Scientist.

Major goals: To assess whether a pain coping skills training intervention with optional opioid taper support decreased opioid dose and improved pain and functioning in those on moderate-high dose long-term opioid therapy for chronic pain.

Contract #: CW149304

9/9/2020–5/8/2022

GlaxoSmithKline

GSK Pregnancy Exposure Study

Direct Costs: \$302,486.

Role: Collaborative Scientist

Major goal: Using data from 6 data partners, we will describe the use of certain biologic medications in women of childbearing age and pregnant women, to guide future studies of pregnancy outcomes.

1/1/2019–12/31/2019

Kaiser Permanente Washington

Exploring and acquiring new data sources for pregnancy research.

Direct Costs: \$86,918.

Role: Collaborative Scientist.
